Introducing New Trane-Branded Standby Generators

Trane is pleased to announce the signing of a trademark licensing agreement with Lifan Holdings for Trane-branded whole-house and light commercial standby generators.

Lifan Holdings is one of the preeminent manufacturers of standby generators in the world, with a growing presence in the light commercial and residential generator markets. The company has built its reputation on innovation, energy-efficiency, safety and reliability. Trane-branded standby generators will be available throughout the United States and Canada through the Trane network of distributors and dealers, electrical distributors, standby generator specialists, propane distributors and through various hardware channels.

The initial offering of Trane-branded standby generators will be available in 15Kw (single phase) and 20Kw (single and three phase) models providing power capabilities for the following typical applications:

Homeowners:

- Geographical regions with power outages caused by weather
 - Northern Climate (Heavy snowfall/winter storms)
 - Southern Climates (Severe Thunderstorms, Hurricanes)
 - Central US market (Tornados)
- Regions with electrical grid instability
- Second homes / Vacation homes

Business Owners:

- Light commercial opportunities (Retail, Food Service, Gas Stations, Data Centers)
- Need to maintain power to sustain business

The use of a liquid cooled automotive engine provides longer off-grid back-up power capability as well as a higher reliability compared to air cooled products. Each standby generator comes with a Trane Automatic Transfer Switch (ATS) and battery included. All models are designed to run on natural gas or propane with only a flip of a switch on the gas valve.
